

SAMA PARTNERS
THE SECURITY INTELLIGENCE COMPANY

CISO-as-a-Service

Associate of your Security Journey

Our CISOaaS is your security focal point for all issues to build a customized security roadmap

Build your Cyber Resilience for the Road Ahead

The Chief Information Security Officer (CISO)

The CISO is responsible for managing the information and data security risks of an organization. In some cases, he is also responsible for security operations performed by other departments such as IT. Their responsibilities include, but are not limited to, real-time analysis of immediate threats, identification of potential security issues and implementation of security hardware and software.

He may procure cybersecurity products and services and to manage disaster recovery and business continuity plans.

The CISO is also responsible for the overall corporate security of the company, which includes its employees and facilities.

Why do you need a CISO?

Companies are recognizing the importance of having a security manager on staff because it is essential to have strong security procedures and mechanisms in place to ensure business continuity. Asset protection and (security) risk and incident management are the pillars of reliable security.

The CISO-as-a-Service (CISOaaS)

The CISOaaS, a strategic cybersecurity advisor who is not a traditional internal employee. He can work onsite or offsite. With a CISOaaS, you are primarily outsourcing cybersecurity responsibilities and tasks, but assigning them to a qualified specialist with the necessary experience and expertise.

Your Security Journey Challenges

- Finding an experienced, well-qualified CISO in today's competitive information security job market is challenging, time-consuming and expensive.
- By 2023, 30% of CISOs' effectiveness will be directly measured on the role's ability to create value for the business.
- Critical challenges to begin strategizing for actions to take to move the organization in the right direction.
- Inalienable, critical and pivoting position
- Multiplication of the workload of CISOs already saturated by the effects of COVID19.

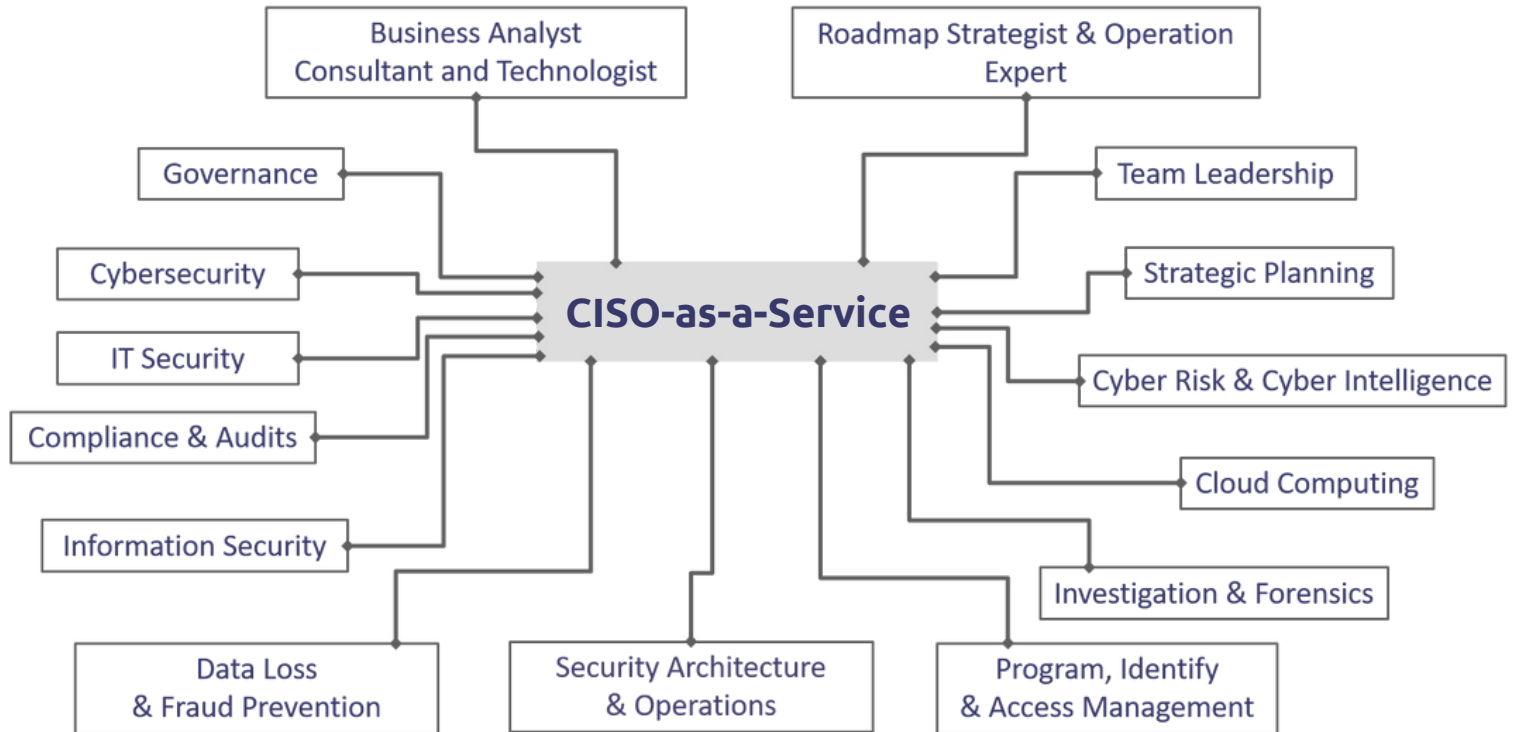

Our CISOaaS Duties

- Building security Strategy & Roadmap.
- High-level cost estimates for budgetary purposes.
- Project planning and execution.
- Testing implemented policies and procedures.
- Guidelines & Best Practices.
- A deep knowledge of the sector.
- Information security program leadership.
- Security Point-of-Contact for All Issues.
- Communication with Top management.
- CISO security program steps.
- Founded Experience, Expertise, Leadership.

The IT business requires more and more reactivity and flexibility. They are accompanied by constant risks and increased responsibility in conjunction with accelerated new cyber threats. Our CISO-as-a-Service bridges the gap between the security challenges and your business goals.

SAMA PARTNERS Approach to CISOaaS

In the current era, the security landscape has evolved, with the expansion of the enterprise edge, the explosion of cloud and mobility, with changes in threats and risks, and even in regulatory environments. The CISO has therefore become a major player in the management of the company. To fulfill his responsibilities, he must necessarily possess very specific skills and abilities.

CISOaaS - Spectrum of Deliverables

Our CISOaaS has clear deliverables which are far more agile than a full-time employee. He divides these responsibilities into the following categories:

Operational Security: He analyzes immediate threats in real time and prioritizes them in case of a problem.

Cyber Risk and Cyber Intelligence: He keeps abreast of security threats. It helps you to understand potential security issues that may arise from mergers, acquisitions or divestitures.

Data Breach and Fraud Prevention: He ensures that internal personnel do not misuse company data.

Security Architecture: He plans, provides and deploys security hardware and software. He also ensures that the IT and the network infrastructure is secure by design, based on security best practices.

Identity and Access Management: He ensures that only authorized individuals have access to protected data and systems.

Program Management: He stays ahead of security needs by implementing programs or projects that reduce risks.

Investigations and Forensics: He identifies in case of an attack or crisis, collaborates with his colleagues, and sets up a mitigation plan in order to avoid the repetition of a similar crisis.

Governance: He ensures that all of the above initiatives are carried out in accordance with the allocated resources. He also ensures that his/her colleagues understand the importance of their respective roles in the entire process.

Get your CISO as a Service and Stay Ahead of Risks
